## 3. IOOS Update

Jennifer Rhoades  
NOAA US IOOS Office

# U.S. IOOS Office

Jenifer Rhoades  
August 2014

# IOOS National and Regional Budget

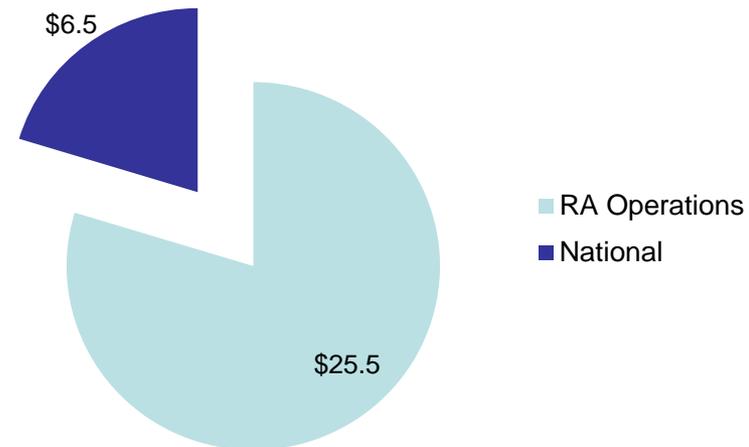

NANOOS Y4 distribution \$2,818,441, including:

\$109,000 for OSU HF Radar

\$217,305 from NOAA Ocean Acidification Program

\$50,000 from SWFSC to support Trinidad Glider Line

FY14 Appropriation \$35M

Marine Sensor Innovation awards (Sept 2014)

FY15 President's Budget (\$36.1M)

- \$6.593M NOAA IOOS
- \$29.5M Regional IOOS (1M increase for MSI)

# ICOOS Act Re-Authorization

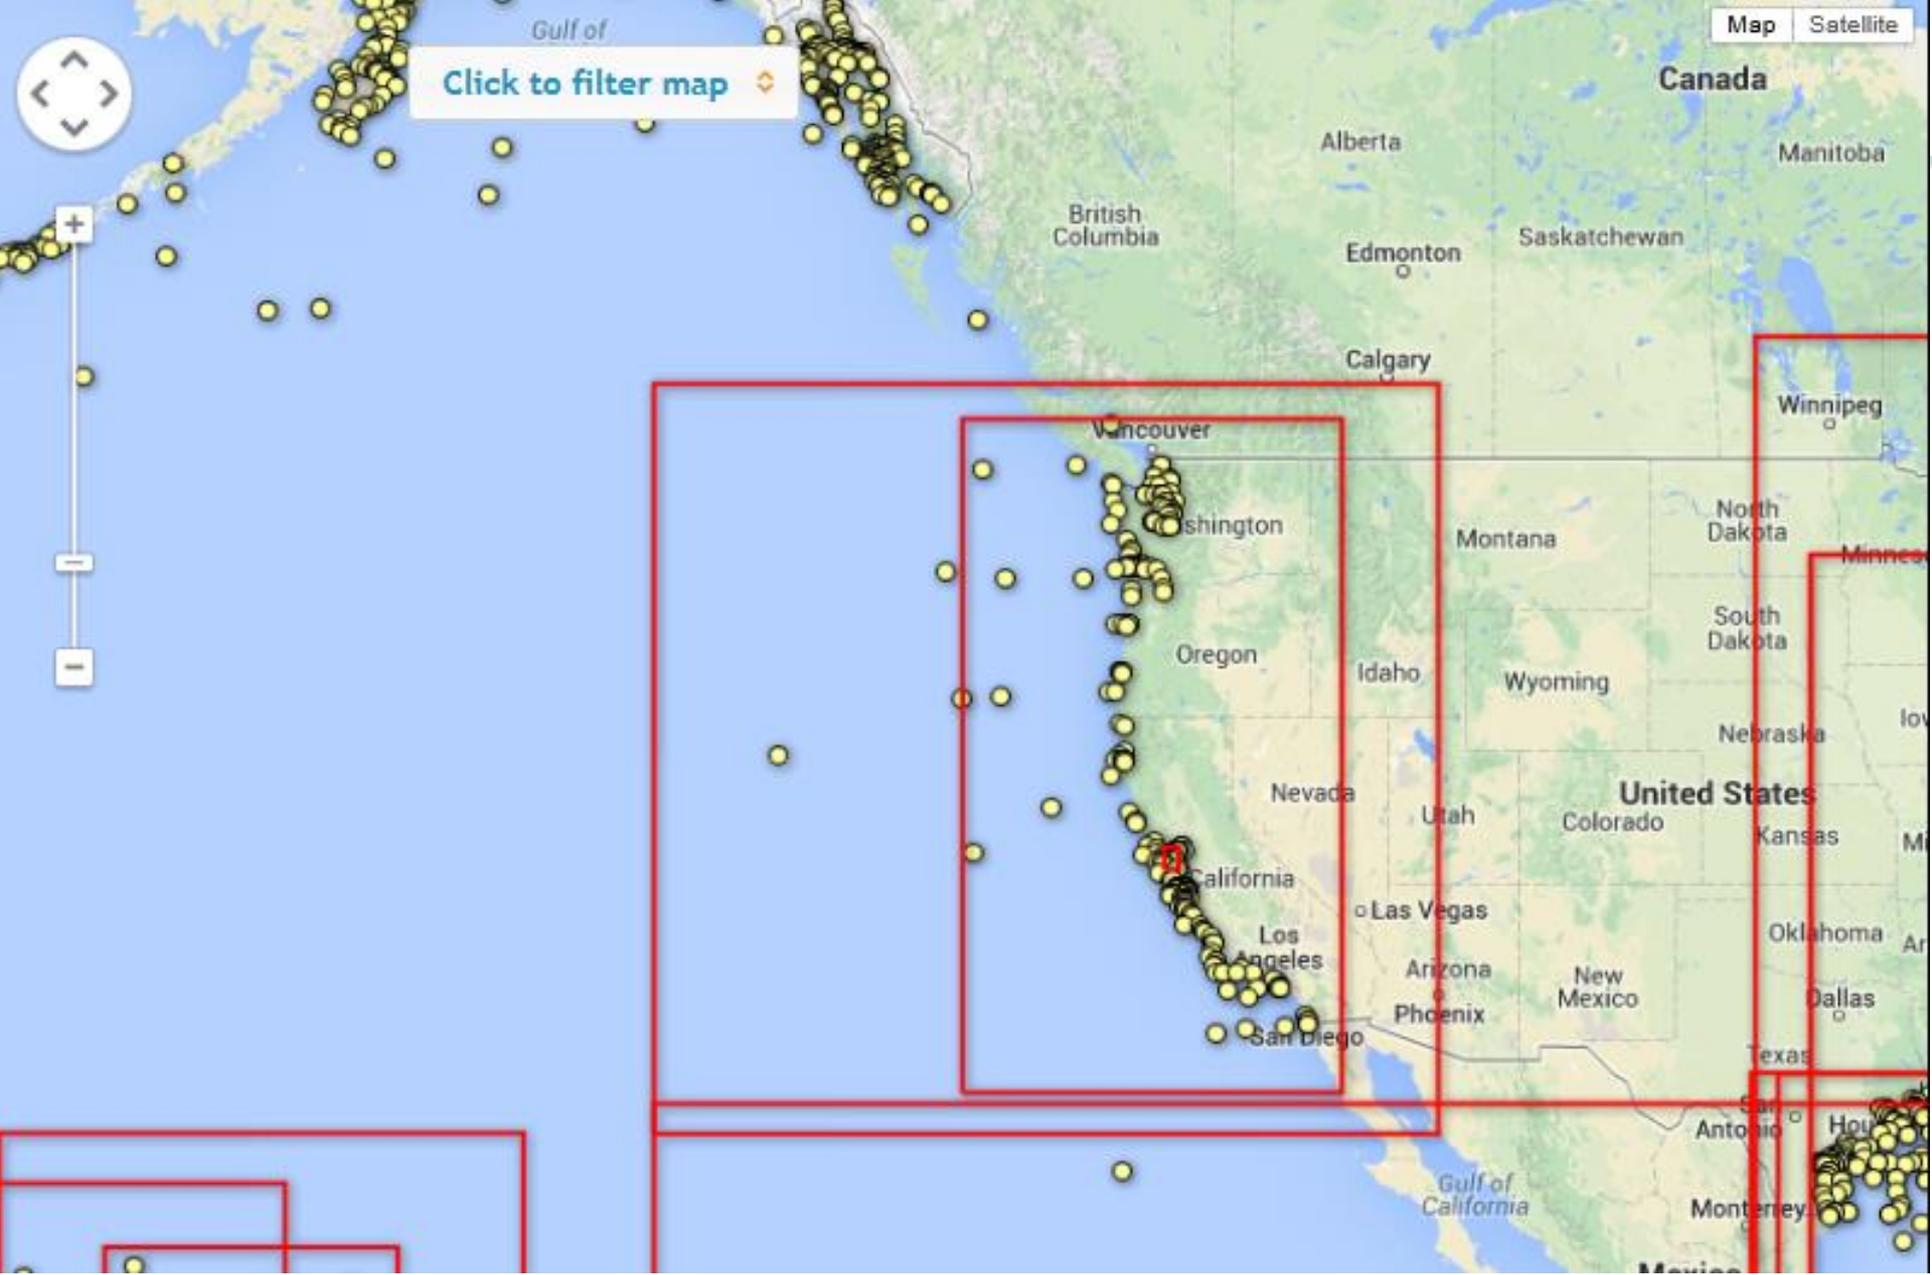

# Forward Look at FY2015

- IOOS Program Office Over-Arching Priorities
  - DMAC and Modeling Progress
  - HF Radar
  - Marine Sensor Innovation
  - Certification
  - FY16 FFO Development

# DMAC and Modeling

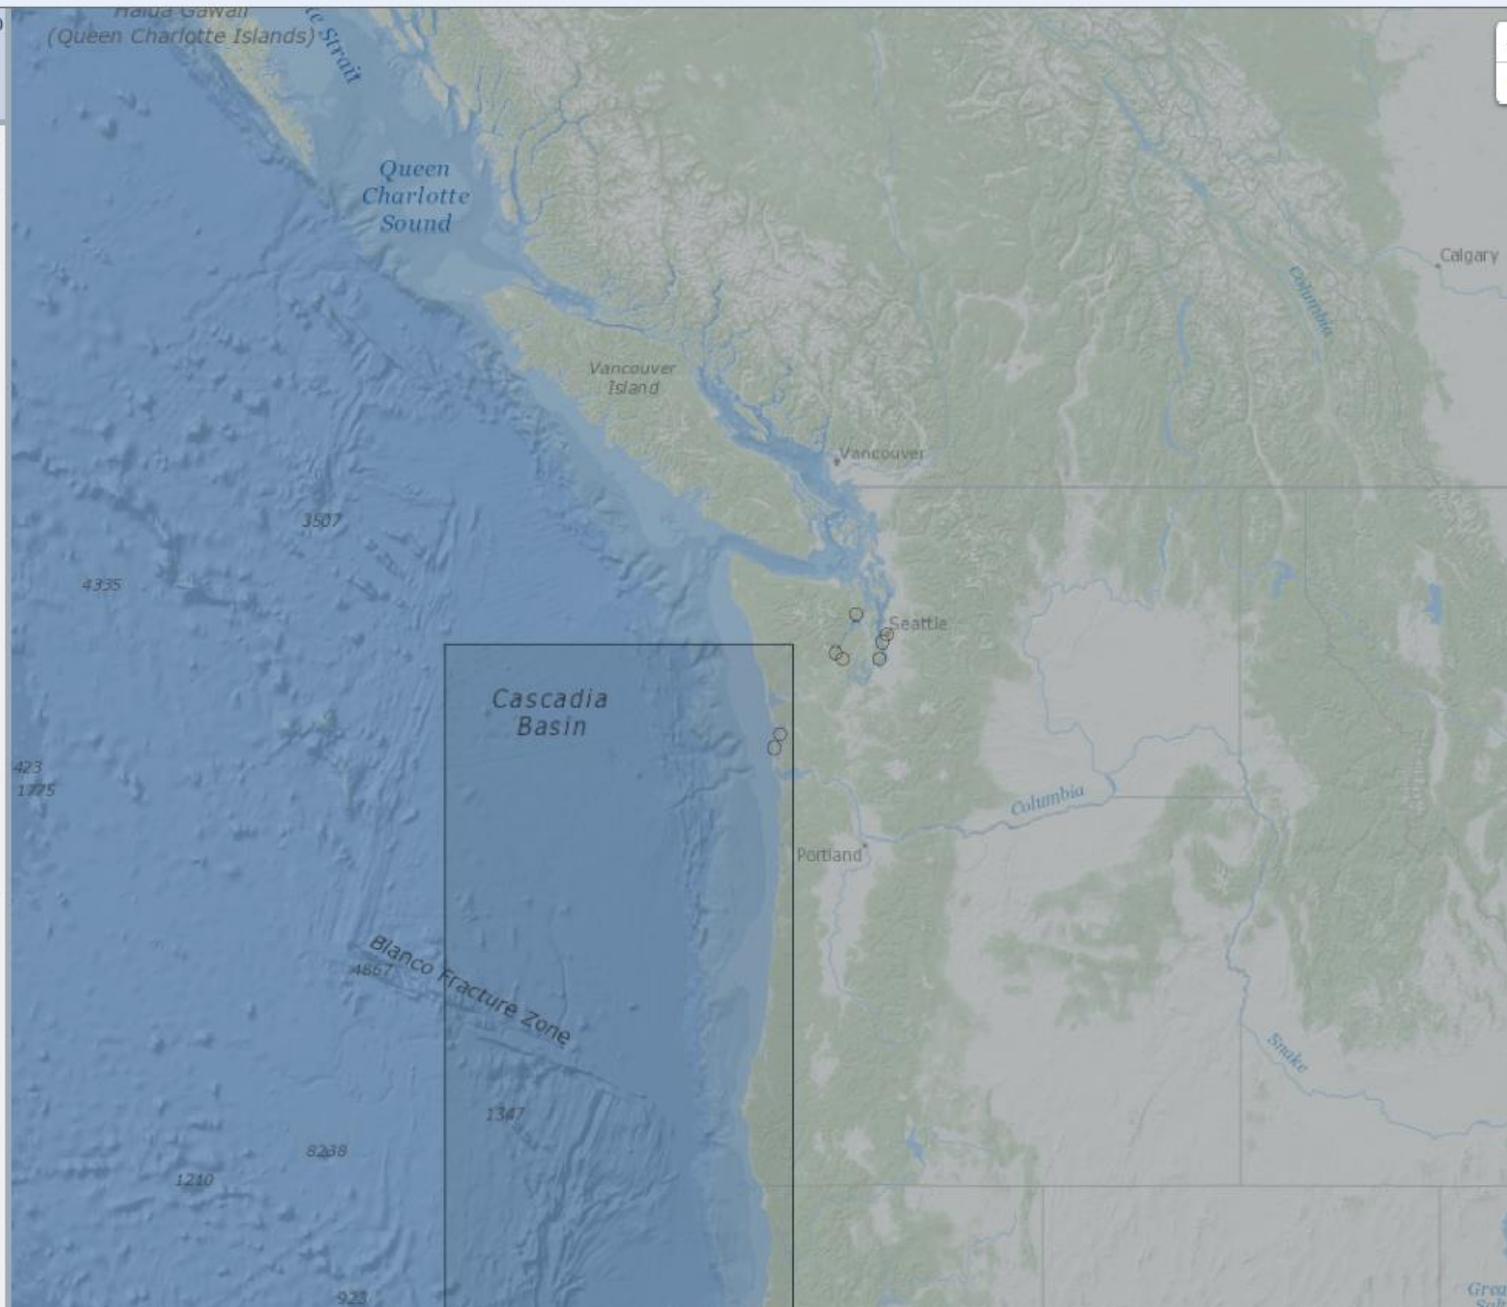

- DMAC Focus
  - Routine Service Monitoring to ensure version control and performance
  - V3.0 IOOS Catalog Released (<http://catalog.ioos.us/map>)
  - **Continue to Register services ([ioos.catalog@noaa.gov](mailto:ioos.catalog@noaa.gov))**
  - Continue systems integration test of IOOS DMAC services
- Sustain QARTOD
  - Five manuals published
  - Publish Water Level manual (currently under review).
  - October 2014: Develop Ocean Optics Manual
- Modeling
  - Publish a national modeling strategy
    - Working groups formed
    - Draft scheduled for release - Sept 30

## 4. NANOOS Update

Jan Newton

NANOOS Executive Director

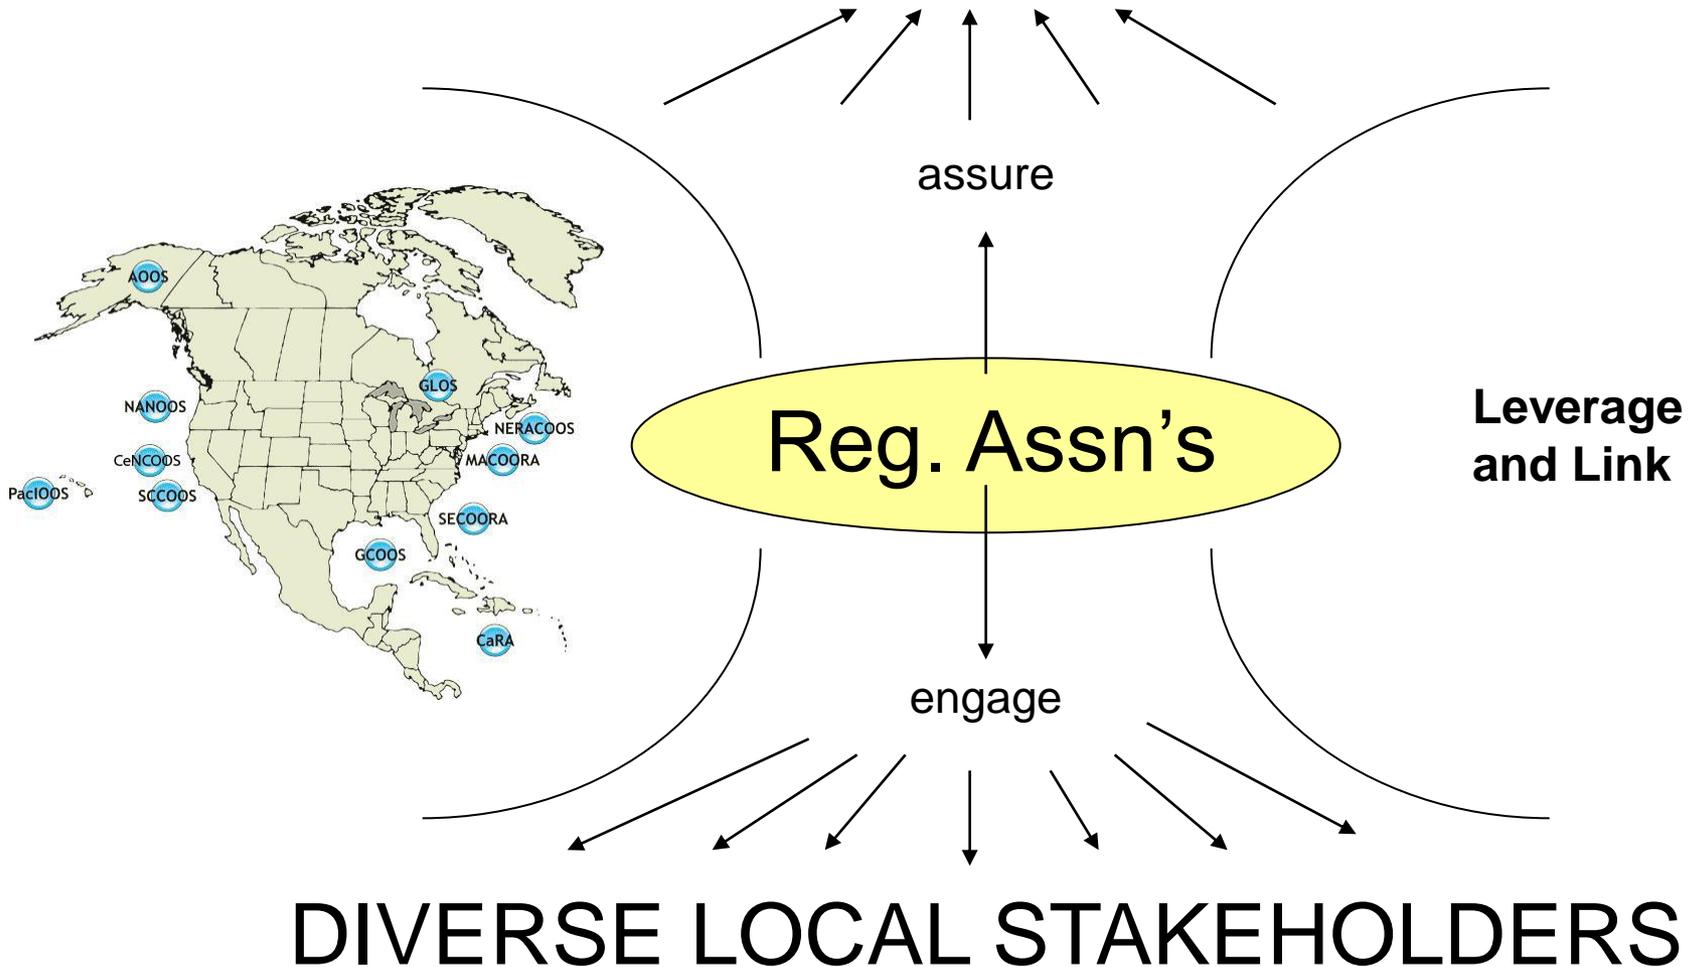

Northwest Association of Networked Ocean Observing Systems  
The Integrated Ocean Observing System (IOOS)  
Regional Association for the Pacific NW

[www.nanoos.org](http://www.nanoos.org)

# CONSISTENT NATIONAL CAPABILITY

# Integrated Coastal & Ocean Observation System Act of 2009

## Created IOOS, with NOAA as lead Federal agency

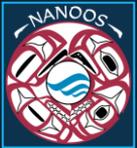

“The purposes of this subtitle are to--

- (1) establish a national integrated System of ocean, coastal, and Great Lakes observing systems, comprised of Federal and non-Federal components coordinated at the national level by the National Ocean Research Leadership Council and at the regional level by a network of regional information coordination entities, and that includes in situ, remote, and other coastal and ocean observation, technologies, and data management and communication systems, and is designed to address regional and national needs for ocean information, to gather specific data on key coastal, ocean, and Great Lakes variables, and to ensure timely and sustained dissemination and availability of these data...”

# Integrated Coastal & Ocean Observation System Act of 2009

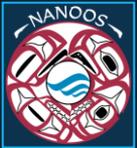

“In order to fulfill the purposes of this subtitle, the System shall be national in scope and consist of--

- (A) Federal assets to fulfill national and international observation missions and priorities;
- (B) non-Federal assets, including a network of regional information coordination entities identified under subsection (c)(4), to fulfill regional observation missions and priorities;
- (C) data management, communication, and modeling systems for the timely integration and dissemination of data and information products from the System;”

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## NANOOS budget:

FY07-09: \$1.4M + 0.4M = \$1,800,000

Year 1, 2, 3

FY10: \$1.7M + 0.4M = \$2,100,000

Year 4

FY11: \$2,087,500 (*w/ new start date*)

Year 5 or 1 of new 5-y award

FY12: \$2,428,291 (\$2,288,000 base; ~\$140K for DMAC, OA workshops)

Year 6 or 2

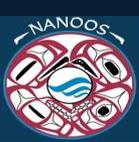

FY13: \$3,089,477 (\$2,392,136 base; <\$700K for MSI on OA plus OAP)

Year 7 or 3

FY14: \$2,818,441 (\$2,442,136 base; \$109K for HF repairs and spares;

Year 8 or 4

\$217K for OAP; \$50K for Trinidad glider line)

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## **NANOOS base budget:**

**FY10: \$2.1M, E#1: \$3.2M, E#2: \$4M**

### ***At FY14 level of \$2.4 M:***

- All observational efforts up to 60-68% of Enhancement #1 level; outer coastal shelf buoys (OR & WA) at 80-90%*
- Modeling at 50-70% of Enhancement #1*
- DMAC at 50-75% of Enhancement #1*
- E&O and Management at 90-100%*

**NANOOS**

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

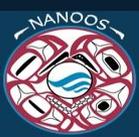

WASHINGTON - OREGON - NORTHERN CALIFORNIA

# **NANOOS FY 14 base enhancement:**

FY14 \$2,442,136 vs. \$2,392,136 base

***Where to invest \$50K enhancement?***

- *DMAC/UPC*
- *affirmed by GC Board ExCom*
- *distributed to DOGAMI, OHSU, OSU, UW*
- *in consultation with team*

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## FY14:

- “This amount is less than what was originally proposed. As you consider which products or services will be impacted by this funding amount, we request that you consult with the U.S. IOOS program office prior to removing any type of assets from deployment, including any proposed reduction in your DMAC capabilities. While the Program Office recognizes the need to balance regional and national priorities, disproportionate cuts to DMAC shall be avoided. In accordance with ICOOS Act direction to the U.S. IOOS Program Office to develop national system capacity, the Northwest Association of Networked Ocean Observing Systems will make the following allotments with FY14 funding:
- No less than \$405,000 to fund operations and maintenance of High Frequency Radars. While you may allocate these funds to support any HF Radars within the region, the allocation should not be one that negatively affects the performance of priority HF Radars for the benefit of non-priority HF Radars. Priority HF Radar performance will be measured using a metric to be developed with input from the National HF Radar Technical Steering Team.
- \$109,000 for repairs and spares for OSU HF radars.
- \$66,291 for the UW’s Ocean Acidification observatories.
- \$151,014 for OSU’s Ocean Acidification monitoring & prediction in OR coastal waters.”

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## NANOOS enhancements:

- *HF radar & repairs/spares*
- *OA Program funding for OA buoy ops*
  - *NH-10 (OR) and La Push (WA)*
- *Trinidad glider line*
  - *Collaboration with SWFSC and CeNCOOS*

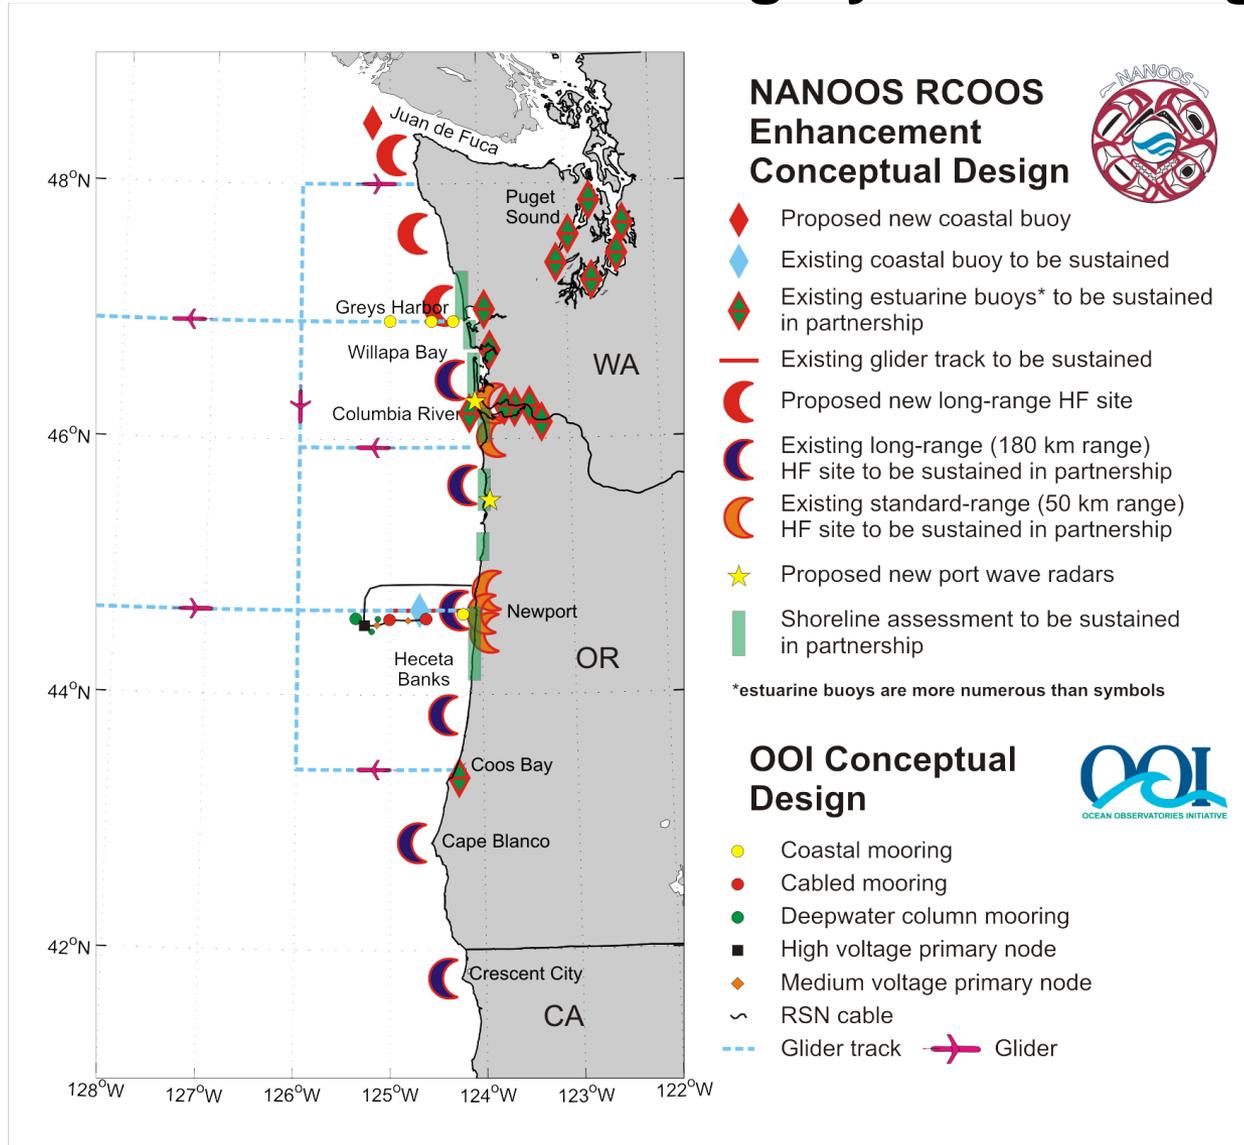

# NANOOS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## PNW Ocean Observing Systems Design

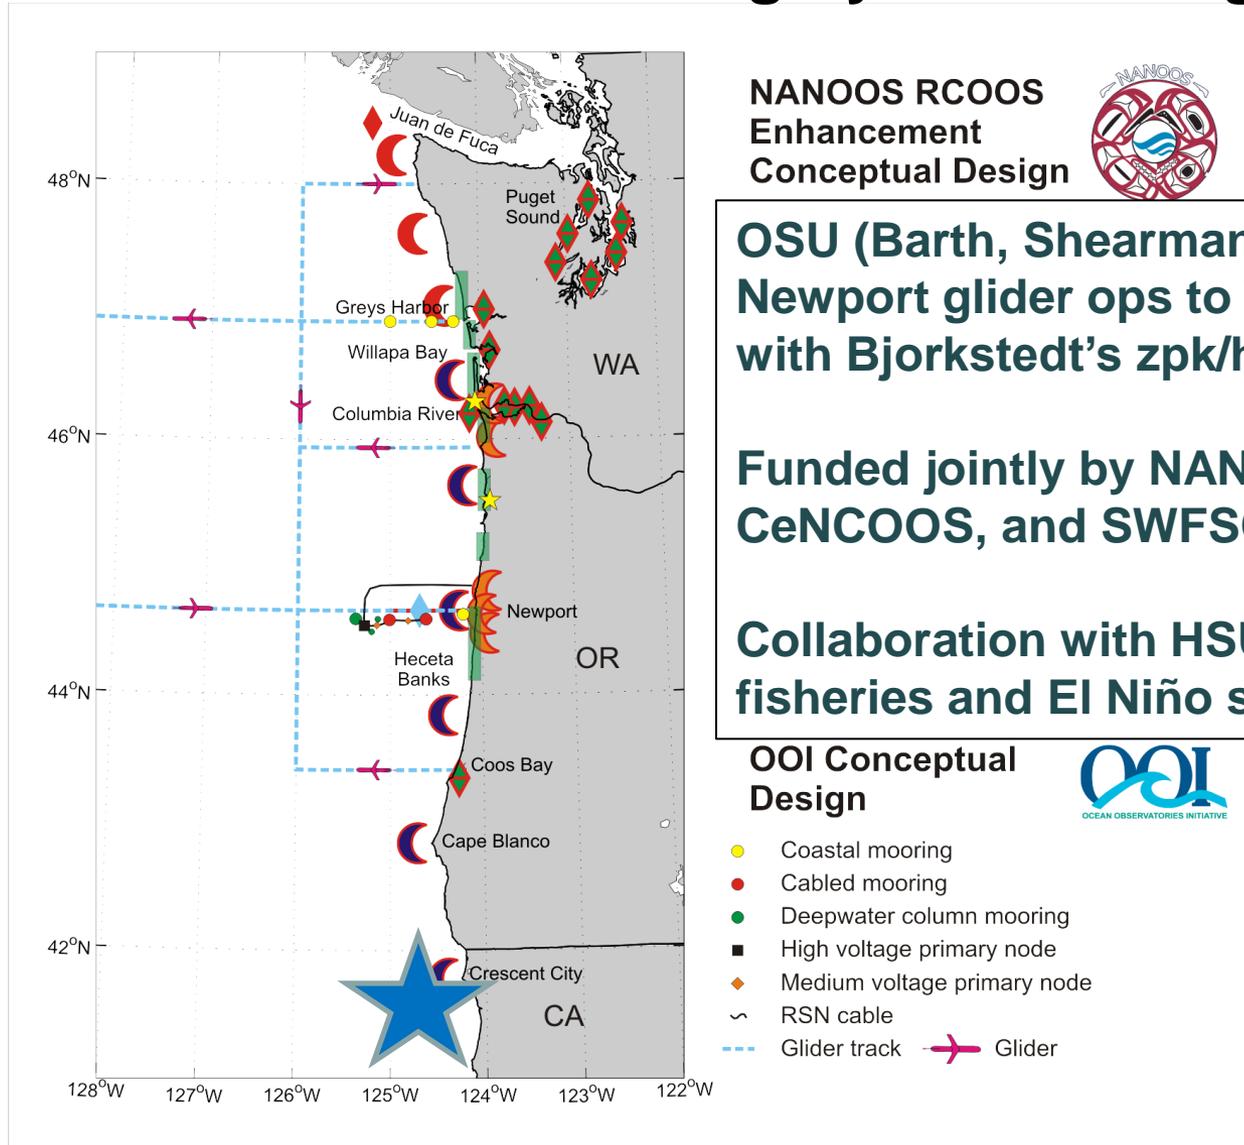

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## FY 14 MSI and NANOOS

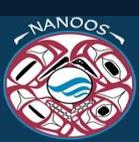

- *FFO for competitive process*
- *Three year awards*
- *Two tracks:*
  - *1. marine sensors*
  - *2. OA with stakeholders*
- *NANOOS part of 7 submissions (6 and 1)*
- **Total of five MSI recommended to GMD**
- **NANOOS anticipates two !!**
  - Track 1: ESP for HABs; Mickett, PI
  - Track 2: “High beams” for OA; Newton, PI

## HABs

**“Operational ecological forecasting of harmful algal blooms in the Pacific Northwest using an environmental sample processor”**

- ESP on Cha'ba at La Push
- UW, NOAA NWFSC, MBARI, NOAA CCEHBR, NWIC, Spyglass, WHOI
- Detects *Pseudo-nitzschia* cells, species, toxicity
- Strong support from coastal tribes
- Tested in PS 2013; NANOOS served data
- HAB bulletin not funded, but still hoping to do

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## OA

**“Turning the headlight on 'high': Improving an ocean acidification observation system in support of Pacific coast shellfish growers.”**

- New “ACDC”  $p\text{CO}_2$  sensor
- UW, OSU, Sunburst, AOOS, CeNCOOS, SCCOOS, NOAA PMEL, PCSGA
- Lower cost  $p\text{CO}_2$  for “weather” grade data
- Strong support from shellfish industry
- Builds on current MSI award for Burke-o-lators in more hatcheries and new IPACOA portal

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## Other NANOOS benefits

- Kurapov et al. awarded WC COMT
  - NANOOS, CeNCOOS, SCCOOS
- MacCready et al. awarded Forecast modeling award from WA OA Center
- NOAA FATE funded J-SCOPE, to refine & assess model and work with fisheries managers
- WC Gov Alliance funded Sea Grant fellow, Laura Lilly to work with them and the three OOS'es on marine debris and OA

**NANOOS**

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

# **NANOOS priorities:**

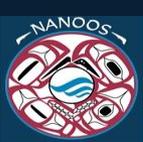

Ecosystem Assessment

Fisheries & Biodiversity

Maritime Operations

Coastal Hazards

Climate & Weather

**NANOOS**

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

# Accomplishments:

NANOOS sets bar high

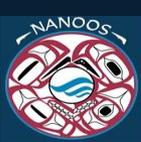

The region is coming to NANOOS

NANOOS is supporting the region

NANOOS is relevant nationally

NANOOS leadership visible internationally

NANOOS uses its governance; is growing

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## New member drive

- **Feds:** WFOs
- **Tribes:** Oregon tribes
- **State:** *is everyone in?, WA Health*
- **Industry:** Microsoft Research
- **NGOs:** *re-engage Surfrider*
- **Academic/Research:** *who else?*

# 2012-16 NANOOS GC Board

## **Academic:**

- David Martin, Governing Council Board Member for UW
- Mike Kosro, Governing Council Board Member for OSU
- Antonio Baptista, Governing Council Board Member for OHSU

## **State:**

- Carol Maloy, Governing Council Board Member for Washington State Agencies
- Vicki McConnell, Governing Council Board Member for Oregon State Agencies

## **Tribes:**

- Paul McCollum, Governing Council Board Member for Tribes
- Joe Schumacker, Governing Council Board Member for Tribes

## **Federal:**

- John Stein, Governing Council Board Member for Washington Federal Offices
- Andy Lanier, Acting Member, Governing Council Board Member for Oregon Federal Offices

## **Industry:**

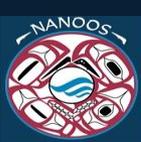

- Casey Moore, Governing Council Board Member for Industry
- [Steve Uczekaj, Governing Council Board Member for Industry](#)

## **NGO:**

- Fritz Stahr, Governing Council Board Member for Non-Governmental Organizations
- [Jody Kennedy, Governing Council Board Member for Non-Governmental Organizations](#)

## **At Large:**

- Rich Chwaszczewski, Governing Council Board Member At-Large
- Chris Mooers, Governing Council Board Member At-Large

# NANOOS

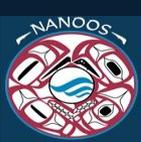

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## NANOOS business

- Fill 2 vacant seats on NANOOS GC Board
  - Any volunteers, please self identify; opportunity will be advertised; ballot distributed
- Identify how NANOOS pays annual \$500 non-federal dues to IOOS Association
  - Discussion/volunteers today; if needed, e-mail to industry & NGO members

# NANOOS

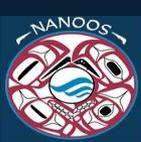

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## Opportunities

- More partnerships on many levels
- Diversify our funding portfolio
- User service (help, specialization, etc.)

# NANOOS

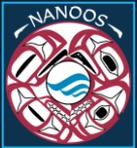

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## Challenges

- Sustaining infrastructure on ~level funding
- Next 5-y plan/proposal
  - Balance “sustain” with “new”

# NANOOS

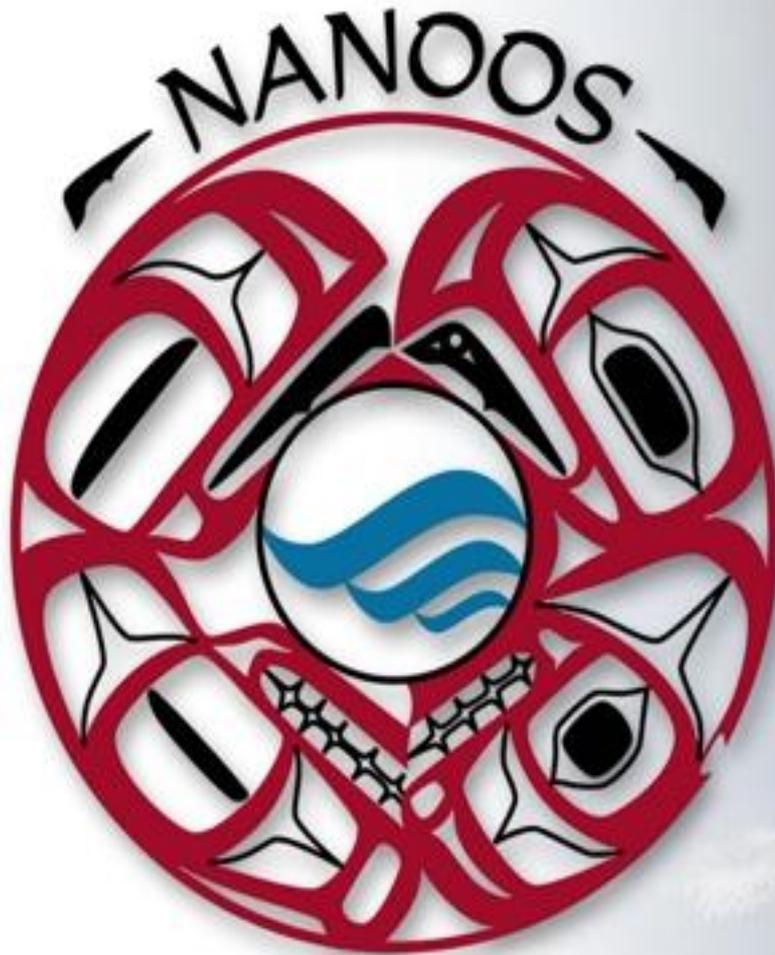

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## NANOOS remains vital !

- “Why is NANOOS so good?”
  - The people: creativity
  - The spirit: cooperation
  - The concept: collaboration

## User Products

Jonathan Allan

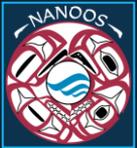

## The NANOOS visualization system

- The past: **disparate suite of web sites available to the public** (serving a wide range of data); often complex and confusing, or were simply inadequate
- **Regional needs:**
  - **seamless delivery of coastal, estuarine and ocean data to stakeholders within the NANOOS domain** at appropriate time and spatial scales (+external partners, other RCOOS, and national/international programs).
  - aid our understanding of **climate variability in our coastal ocean**, reduce the potential for loss of life (i.e. **improve safety**), meet the needs of maritime **operations**, and lead to **improved resource management** and **regional productivity**.
- **NANOOS currently provides access to 47 different types of variables, and in total 173 ‘assets’ & 9 model/forecast overlays and growing.**

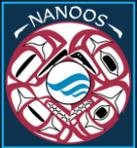

Effective delivery of these data and product feeds can lead to:

- **greater situational awareness (local and regional scales);**
- **improved access to and understanding of environmental variables/conditions; and,**
- **enable development and access to short- and long-term time-series.**

## A Challenge - Many Stakeholders

- State agencies (e.g. ODFW, WADOE, DSL, etc.)
- Federal agencies (NOAA, NWS, FEMA, US Coast Guard, etc.)
- Cities and Counties
- Ocean engineering (instruments, wave energy, telecommunication)
- NGO's
- Ports
- Bar pilots
- Fishers (recreational and commercial)
- Shellfish growers
- Recreational boaters
- Tribes
- Geotechnical consultants
- Universities/researchers
- Schools (K-12)
- Public-at-large
- Scientists
- and many others...

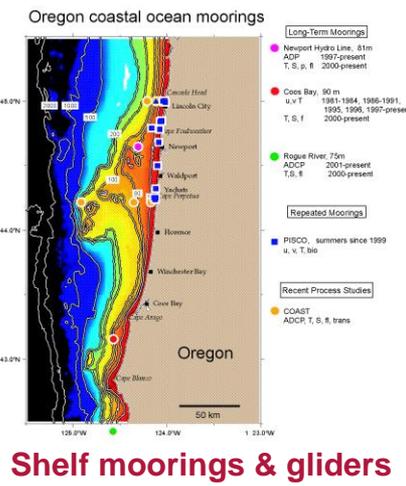

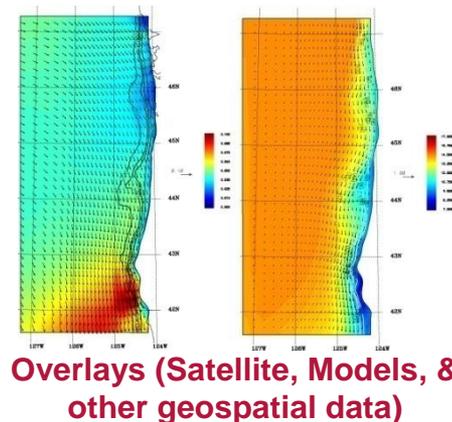

# NANOOS

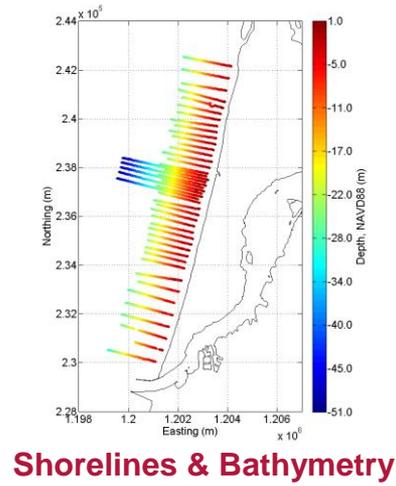

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

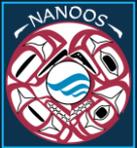

## A Challenge - Many Data Types & How to Display Complex Data Effectively

Shelf moorings & gliders

Shorelines & Bathymetry

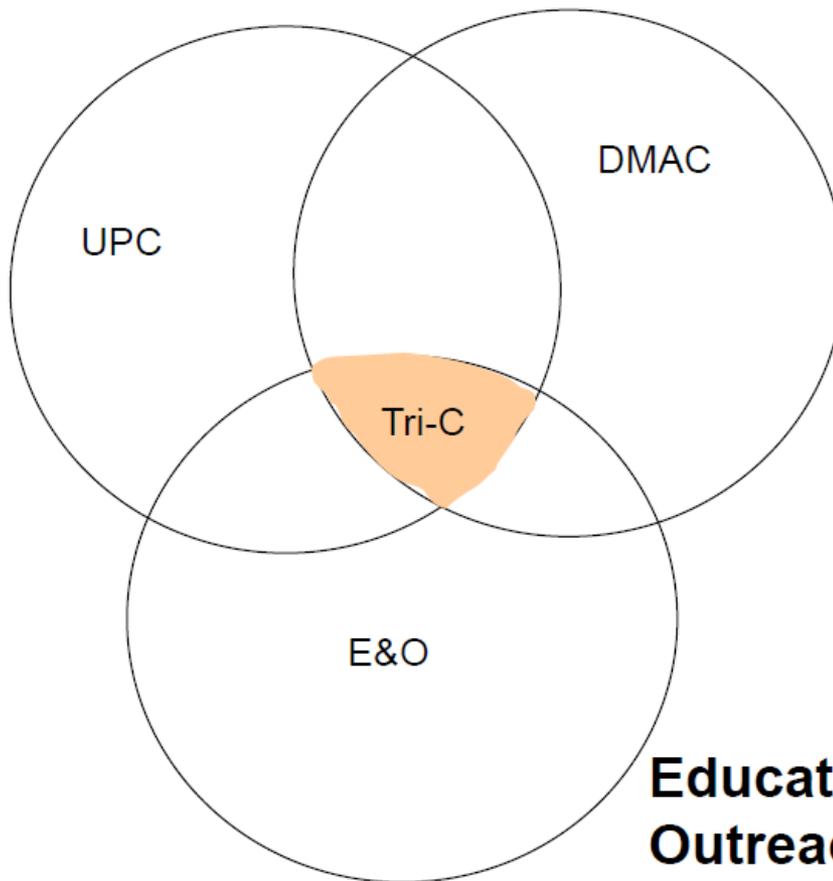

# NANOOS

**Education and  
Outreach Committee**

- Weekly tag-ups
- Annual/biannual meetings (e.g. Apr 2014) – develop goals for forthcoming year

## **NVS History and Status:**

Nov. 2009 - v1.0 released

....

May 2010 - v1.6 released (added access to various map image overlays e.g. HF radar, satellite imagery, and ocean models). v1.0 iPhone NVS mobile app released

....

Jun 2011 - v. 2.0 iPhone NVS released (Android Sep 2011)

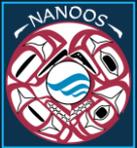

Nov 2011 - v2.6 released (added Tsunami evacuation zones NVAP, and user created places)

Nov 2011 - v. 1.0 iPhone TsunamiNW-Evac app released (Android Jan 2012)

Mar 2013 - v3.0 – Major overhaul of interface; move to Google Maps 3 API; move to web apps.

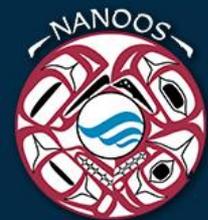

Apr 2014 – v3.2 – Major overhaul of NANOOS database and harvesters.

Apr 2014 – v3.5 – Added boaters app (Xtide currents and tides)

**NVS Data Exploration**  
 NVS (NANOOS Visualization System) is a web app that provides easy access to observations, forecasts, data, and visualizations.

### Nautical Charts are available on NVS Web Apps

Nautical charts are available on both the NVS Maritime Operations and NVS Tuna Fishers Apps. To view NOAA Navigational Charts, select "Charts" from the left hand menu and charts will display on the map. Within the Charts Panel, users can select "Seamless Nautical Charts" to be able to pan and zoom within the entire map view.

## ADDITIONS & UPDATES

[View Last 3 Months](#)

### WCSH-PCSGA Whiskey Crk

Sensor data collection and transmission are available again in near-real-time. New sensors and processing target ocean acidification observations, including aragonite saturation state. Data from previous 60 days have been loaded.

*Updated on 5 Aug 2014*

### EC 46036

Offline since May 26. Status message from Environment Canada: 'Serviced May 4/14. Failed May 26/14'.

### APL-UW NPB-1

The buoy was refurbished extensively and redeployed on Jul 31. Water profiling has resumed.

*Updated on 1 Aug 2014*

### STTI Port Susan

Oxygen sensor was replaced on July 15; oxygen data ingest into NVS was reestablished on July 23.

*Updated on 1 Aug 2014*

### NDBC Washington

Buoy restored to service around July 10, 2014, after two years offline. Location (lat & lon) was updated to the new deployment coordinates.

*Updated on 31 Jul 2014*

### OSU NH-10

Ocean acidification sensors measuring CO2 in air and surface water, and pH, now being ingested into NVS. First deployed with the NH10 redeployment in April (and previously, w/o telemetry), these sensors are a collaboration between NANOOS, OSU and PMEL.

*Updated on 14 Jul 2014*

## Data Management and Communications (DMAC)

presentation to NANOOS Principal  
Investigators & Governing Council  
August 12, 2014

NANOOS DMAC co-chairs:  
Emilio Mayorga – UW  
Stephen Uczekaj – Boeing

## DMAC Core Team

Emilio Mayorga – UW/APL, Co-Chair

Stephen Uczekaj – Boeing, Co-Chair

Jonathan Allan – DOGAMI OR, User Products Chair

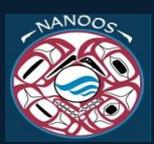

Rick Blair – Boeing, Infrastructure and Standards

Alex Dioso – UW/APL, System Administration

Charles Seaton – OHSU/CMOP, Data Provider Services

Craig Risien – OSU, Data Provider Services

Troy Tanner – UW/APL, Portal Services, System Administration

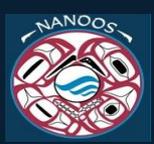

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## DMAC Events

- Quarterly IOOS DMAC Steering Committee (Steve Uczekaj)
- Marine Portal Planning meeting (Aug 2013, Portland)
- **IOOS DMAC Workshop (Sept. 2013)**
- WCGA Ocean Data Network meeting (Nov. 2013)
- **Annual DMAC-UPC meeting (Feb. 2014, Portland)**
- Co-led two monthly IOOS DMAC webinars: Python data access solutions, and Hydrological data (NSF-funded CUAHSI and Water Data Center), Feb. & May, 2014
  - *2013-2014 special support from IOOS DMAC for special projects advancing DMAC standards and capabilities*

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## “Aging Infrastructure”

# 2013-2014: Enhanced hardware and backend software environments

- **NVS:** Overhauled server environments, User-Interface framework, database structure, and data harvesting code. Much more capable and adaptable infrastructure.
- **UW:** New hardware, new backend management operations, upgraded software environments.
- **OSU:** New server, improved THREDDS service.
- **OHSU/CMOP:** Improved THREDDS service.

# NANOOS

## NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

# NVS: More adaptable, and external funding support (NOAA OA & NSF)

## IOOS Pacific Region OA Explorer

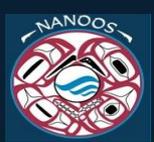

## NSF Critical Zone Observatories

**Welcome to the Critical Zone Observatories Data Portal**

The Program serves the international scientific community through research, infrastructure, data, and models.

We focus on how components of the Critical Zone interact, shape Earth's surface, and support life. If you are interested in conducting research at one or more of the CZOs, please check our Opportunities page.

Recently, the NSF provided support for a Critical Zone Observatory National Office (CZONO). The office will provide logistical support and leadership for a variety of network-wide activities.

## New Data Sets Integrated into NANOOS

**1. Several near-real-time in-situ monitoring assets.** NOAA PMEL CO<sub>2</sub> sensors on existing platforms/sites (NDBC Cape Elizabeth & Seattle Aquarium); OSU CO<sub>2</sub> sensors on NH10 buoy; Penn Cove Shellfish; Vancouver Island University (BC) shellfish research station; Whiskey Creek overhaul (“Burkolator”). *New South Slough NERR site (Coos Bay) very soon.*

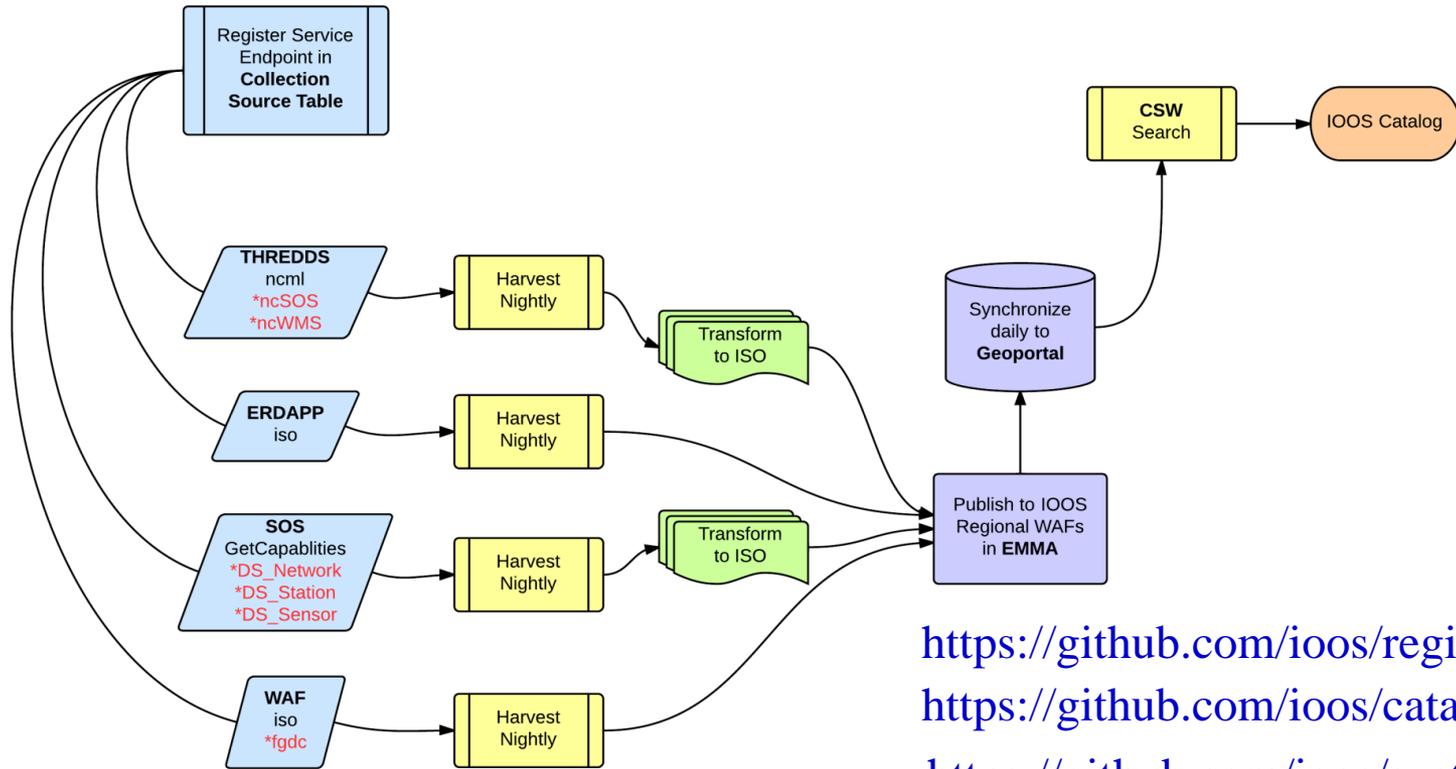

**2. Remote sensing, models, and other forecasts.** OSU satellite climatologies; NCEP HYCOM ocean model forecasts; XTide forecasts.

**3. Climatologies.** From NDBC buoys and OSU satellite climatologies.

*And many redeployments and refinements to existing assets.*

    </ows:Title>
    <ows:Abstract>
      IOOS Sensor Observation Service (SOS) Server for NANOOS, the Northwest Association of Networked
      Ocean Observing Systems (http://nanoos.org). Provides access to marine in-situ observation data for the
      US Pacific Northwest and lower British Columbia, from the NANOOS asset data store harvested and
      integrated by NVS (NANOOS Visualization System, http://nvs.nanoos.org). To avoid data duplication,
      currently only assets not otherwise available to the IOOS Catalog (http://ioos.noaa.gov/catalog) are
      accessible through this SOS server; for example, assets from most federal agencies are not accessible on
      this server, but they are available on the NVS application. This NANOOS service is run by the 52North
      IOOS SOS server software, and complies with the IOOS SOS "Milestone 1" service profile
      (https://code.google.com/p/ioostech/wiki/SOSGuidelines).

## Continued asset integration

- **Regional Assets**

- South Slough NERRS (North Spit very soon; others?)
- Penn Cove Shellfish enhancements
- NEMO profiler
- ADCP currents data
- New opportunities and partnerships

- **Federal Assets**

- Improved NERRS access mechanism (very soon)
- NOS/COOPS, additional variables
- Weather stations at regional airports
- New priorities as they arise

## Data “Types” (origin) vs. Certification and IOOS DMAC

### IOOS 26 Core Variables

name	definition
acidity	Acidity
bathymetry	Bathymetry
bottom_character	Bottom character
cdom	Color dissolved organic matter
contaminants	Contaminants
dissolved_nutrients	Dissolved Nutrients
dissolved_oxygen	Dissolved oxygen
fish_abundance	Fish abundance
fish_species	Fish species
heat_flux	Heat flux
ice_distribution	Ice distribution
ocean_color	Ocean color
optical_properties	Optical properties
pathogens	Pathogens
pco2	Partial pressure of carbon dioxide
phytoplankton_species	Phytoplankton species
salinity	Salinity
sea_level	Sea level
stream_flow	Stream flow
surface_currents	Surface currents
surface_waves	Surface waves
temperature	Temperature
total_suspended_matter	Total suspended matter
wind	Wind Speed and Direction
zooplankton_abundance	Zooplankton abundance
zooplankton_species	Zooplankton species

1. NANOOS Supported Assets
2. Federal Assets
3. Regional assets not supported by NANOOS
4. Models vs. observations

QA/QC procedures, documentation – Data submission to IOOS via interoperable standards – Data submission for long-term archiving

## Expanding IOOS DMAC support in ways that also Enhance Capabilities

- **QARTOD (QA/QC).** Documentation, algorithm implementation, compliance. Collaboration with other RA's. Exposed on NVS.
- **Long time series.** Available via compliant IOOS DMAC services. Accessible to NVS and regional users. Initially for prioritized sites.
- **Enhance NANOOS services and Register** all with IOOS DMAC Catalog.
- Expose **NANOOS** model output and glider data with **IOOS Model and Glider DAC's**.
- **Expose NANOOS data products** (climatologies, etc) to IOOS Catalog.

# NANOOS Education & Outreach Update

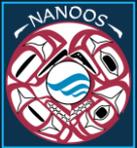

NANOOS Joint PI and Governing Council Meeting  
August 12, 2014

Amy Sprenger, Education & Outreach Coordinator  
Rachel Vander Giessen, Outreach Specialist (as of 2/14)

## Scope of Work

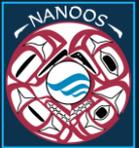

Product Development	Work with DMAC and User Products Committees on tailored product development, increase usability of NVS
User Engagement	Conduct outreach and trainings to select user groups as resources permit
Networking	Maintain existing and build new relationships with NANOOS priority area users and the education community

## Scope of Work

Product Development	Work with DMAC and User Products Committees on tailored product development, increase usability of NVS
User Engagement	Conduct outreach and trainings to select user groups as resources permit
Networking	Maintain existing and build new relationships with NANOOS priority area users and the education community

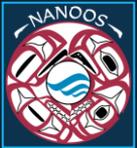

- Through weekly tag-ups, we have consistently provided input on usability of NANOOS products

## Scope of Work

Product Development	Work with DMAC and User Products Committees on tailored product development, increase usability of NVS
User Engagement	Conduct outreach and trainings to select user groups as resources permit
Networking	Maintain existing and build new relationships with NANOOS priority area users and the education community

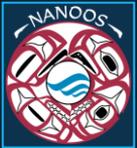

- Throughout FY13, we have provided outreach to a variety of user groups and also to the public at large using social media

## Scope of Work

Product Development	Work with DMAC and User Products Committees on tailored product development, increase usability of NVS
User Engagement	Conduct outreach and trainings to select user groups as resources permit
Networking	Maintain existing and build new relationships with NANOOS priority area users and the education community

- NANOOS is well-regarded in PNW education community; now we are sought after, for our participation, instead of us seeking involvement

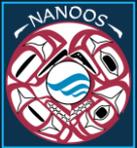

## Education:

*NANOOS goal remains increasing ocean literacy*

- National Science Teacher Assoc. presentation & exhibit – Portland, OR
- “Finding a Story in Data “Teacher workshop – Seattle ,WA
- Ocean Acidification Education workgroup, Marine Resources Advisory Council
- NOAA OAP SOARCE webinar
- NOAA Science Camp
- National Ocean Science Bowl

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

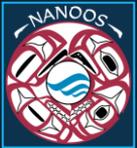

## Informal Education

*Learn by having fun!!!*

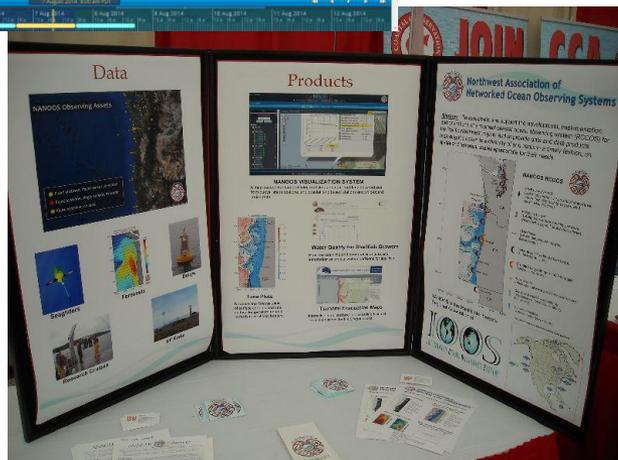

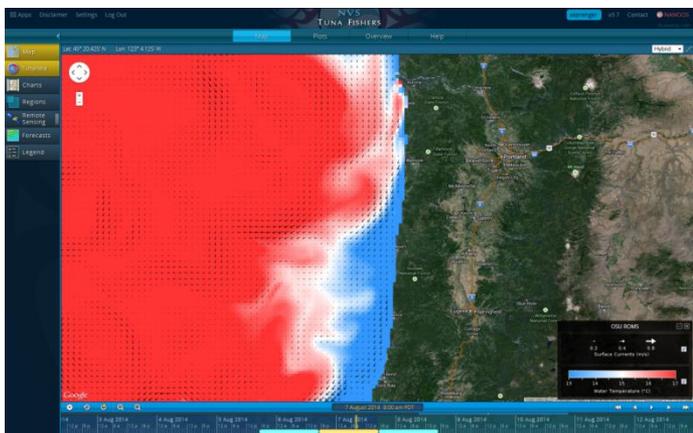

Great Build a Buoy Challenge  
Pacific Science Center

Discover Science Weekend  
Seattle Aquarium

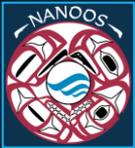

## Outreach: targeted user groups

*NANOOS goal to link user groups with data products*

- Pacific Coast Shellfish Growers Association Meeting, Bend, OR
- Saltwater Sportsmen's Show, Salem, OR
- Aquaculture America 2014
- Sidelights Article on Maritime Operations for Council of American Master Mariners, Inc
- "Native America Calling" Interview

# NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## Outreach: science

Bringing NANOOS to scientists:

Coastal & Estuarine Research Federation IOOS Panel

Salish Sea Ecosystem Conference, New Data Tools and Technologies Panel

PS Marine Waters Overview 2013, 2014

Bringing NANOOS to policy makers:

OA in the PNW FAQ

U.S. State Dept "Our Ocean" Conference

U.S. Senate Testimony on ICOOS Act Re-authorization

Hill visits with NANOOS updates

### Ocean Acidification in the PACIFIC NORTHWEST

**1** The evidence for ocean acidification in the Pacific Northwest is compelling. It consists of published scientific literature representing a large number of laboratory and field observations. The scientific evidence comes from investigations in the natural laboratory of the Pacific Northwest, through the integration of laboratory, field, and observational data. The integration of these data has led to a growing understanding of the ocean and the impacts of ocean acidification in the Pacific Northwest waters.

**2** Ocean acidification (OA) is a process that occurs as a result of increased atmospheric CO<sub>2</sub> concentrations. OA is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future. The rate of OA is increasing, and it is expected to continue to increase in the future.

**3** Ocean acidification has been well documented through a variety of scientific studies. These studies have shown that OA is occurring in the Pacific Northwest at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**4** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**5** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**6** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**7** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**8** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**9** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**10** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**11** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**12** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**14** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**15** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**16** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**17** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**18** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**19** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**20** Ocean acidification is a global phenomenon that affects all oceans. In the Pacific Northwest, OA is occurring at a rate that is comparable to other regions of the world. The rate of OA is increasing, and it is expected to continue to increase in the future.

**Mission:** The U.S. Coastal Ocean Observing System (COOS) is a partnership of scientists, educators, and citizens from the National Weather Service, the private sector, and academia. NANOOS is one of five COOS regional systems that are designed to support the development, implementation, and operation of a regional coastal ocean observing system that provides ocean data and products to decision makers in a timely fashion, as required and requested under the most strict conditions.

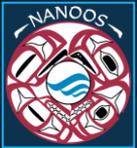

**Focus:** Regional stakeholders identified three high-priority areas: Marine Operations, Coastal Hazards, and Fisheries. NANOOS focuses on observing and understanding the physical, chemical, and biological processes that affect the coastal ocean and its resources. NANOOS also focuses on observing and understanding the physical, chemical, and biological processes that affect the coastal ocean and its resources.

**Sustaining NANOOS:** NANOOS is a growing partnership of over 100 entities in the Pacific Northwest, including federal, state, and local government, academia, and the private sector. NANOOS is sustained by NOAA, the National Oceanic and Atmospheric Administration, and the Pacific Northwest Ocean Observing System. NANOOS is sustained by NOAA, the National Oceanic and Atmospheric Administration, and the Pacific Northwest Ocean Observing System.

**Increasing Data Delivery and Efficiency:** The NANOOS Visualization System (NVS) is a web-based system that provides ocean data and products to decision makers in a timely fashion, as required and requested under the most strict conditions. NVS is a web-based system that provides ocean data and products to decision makers in a timely fashion, as required and requested under the most strict conditions.

## Plan for Y8

### Education Efforts

- Ocean acidification curricula
- Needs assessment re real-time data use in classroom
  - Strategize classroom resource needs for teaching using real-time data, etc.

### Outreach Efforts

- Stay the course!
- Continue to assist with development of new web and mobile apps
- Continue outreach to current users groups, adding maritime ops & recreational boaters communities

## 7. Positioning NANOOS for the future (FY16-20)

**NANOOS**

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

## 7. Positioning NANOOS for the future (FY16-20)

### **Coastal ocean:**

Northern extent of California Current  
Winds, topography, freshwater input, ENSO & other climate cycles

### **Major inland basins:**

Puget Sound-Georgia Basin, Columbia River  
Urban centers, nearshore development, climate variation

### **Coastal estuaries:**

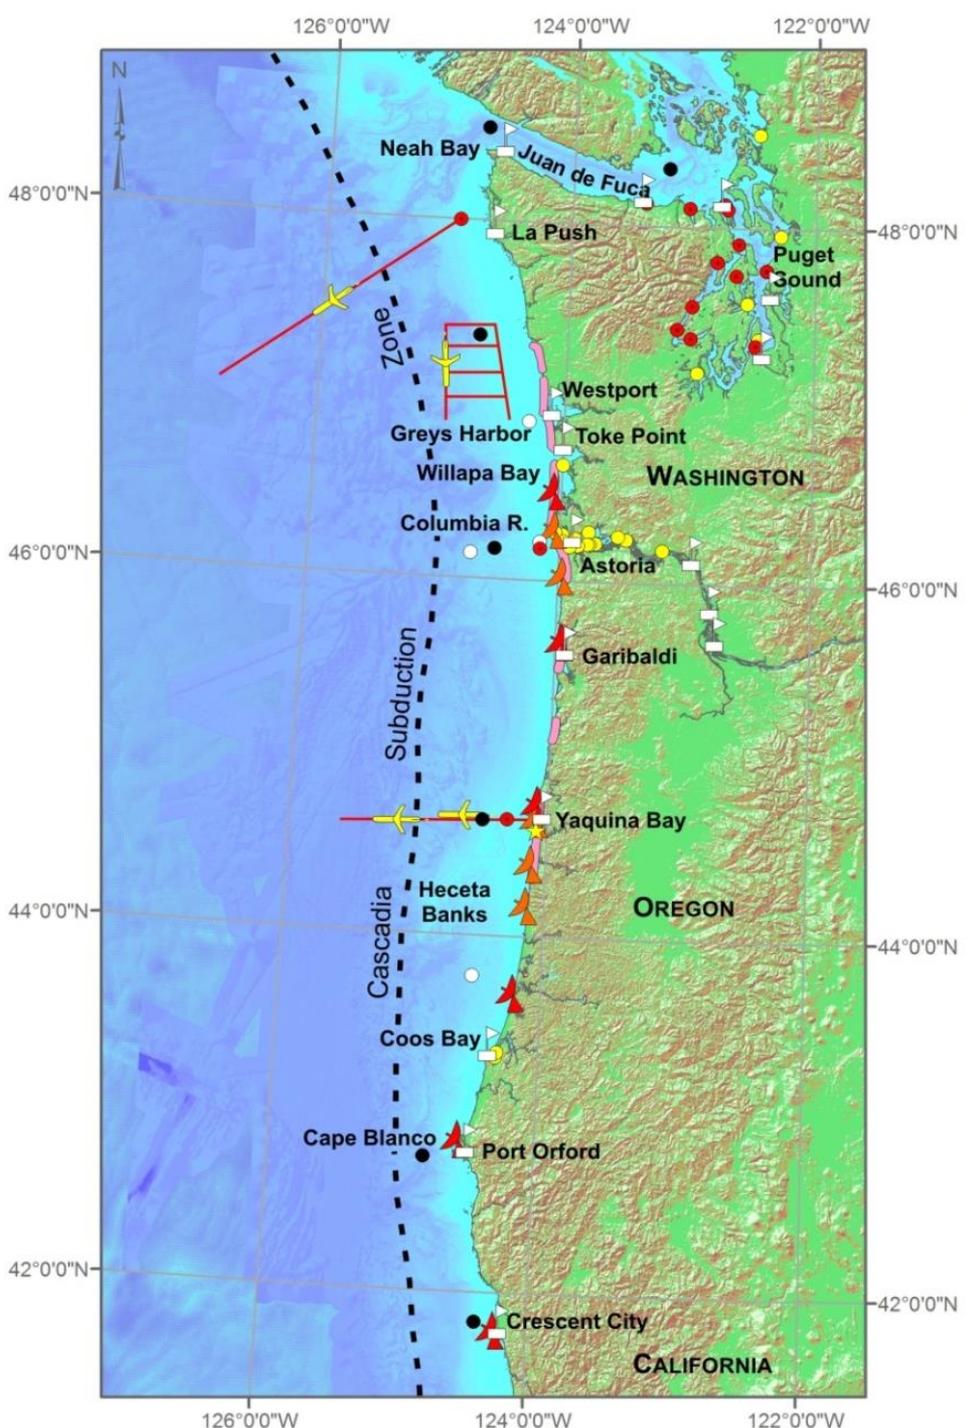

Willapa Bay, Grays Harbor, Yaquina Bay, Coos Bay,  
and 20 more  
Resource extraction, development, climate

### **Major rivers:**

Columbia River (~75% FW input to Pacific from US WC)  
many rivers (e.g., Fraser, Skagit) via Strait Juan de Fuca  
Dredging, water regulation, climate change

### **NANOOS Region User Groups:**

Maritime: shipping, oil transport/spill remediation  
Fisheries: salmon, shellfish, crab, groundfish, aquaculture  
Environmental management: HABs, hypoxia  
Shoreline: erosion, inundation  
Hazards: Search and rescue, national security  
Educators: formal, informal, research  
Marine recreation: boating, surfing, diving

# NANOOS RCOOS

## Existing assets to be sustained in partnership:

- Existing *coastal* and *estuarine* buoys
- Existing fixed mooring *estuarine* buoys
- Existing glider tracks
- ▲ Existing long-range (180 km range) HF radar site
- ▲ Existing standard-range (50 km range) HF radar site
- ★ Port X-band wave radar
- Beach and shoreline assessment. Includes multiple sites where nearshore bathymetry is being collected

## Federal assets:

- NDBC buoys
- CDIP buoys
- ▴ NOS Tide gauges

# **NANOOS focus areas:**

Coastal Ocean

Estuaries and Bays

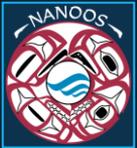

Shorelines

## NANOOS Stakeholder Priorities

The NANOOS Governing Council selected five areas from results of numerous regional workshops as the highest regional priorities because “these issues represent those having the greatest impact on PNW citizenry and ecosystems and, we believe, are amenable to being substantively improved with the development of a PNW Regional Coastal Ocean Observing System:”

- **Maritime Operations**
- **Ecosystem Assessment**
- **Fisheries and Biodiversity**
- **Coastal Hazards**
- **Climate**

**NANOOS**

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

WASHINGTON - OREGON - NORTHERN CALIFORNIA

# Strategy to develop a PNW Observing System

1. Integrate what we have (*observing assets, people, technologies*)  
= federal, tribal, state, local, academic, NGO, and industry
2. Be strategic regarding what we need, based on priorities

# Sustaining NANOOS, the Pacific Northwest component of the U.S. IOOS®

- 1) Maintain NANOOS as the PNW IOOS **Regional Association**.
- 2) Maintain surface **current and wave** mapping capability.
- 3) Sustain existing buoys and gliders in the PNW **coastal ocean**, in coordination with national programs.
- 4) Maintain observation capabilities in PNW **estuaries**, in coordination with local and regional programs.
- 5) Maintain core elements of **beach and shoreline** observing programs.
- 6) Contribute to a community of complementary **numerical regional models**.
- 7) Maintain NANOOS' **Data Management and Communications (DMAC)** system for routine operational distribution of data and information.
- 8) Deliver existing **user-defined products and services** for PNW stakeholders.
- 9) Sustain NANOOS **education and outreach** efforts.

## Process

- Today, we use last year's Governing Council exercise to highlight themes and NANOOS priorities and hear from GC
- Await FFO
- Anticipate using LOI process
- Consult NANOOS Build-out Plan, Business Plan
- Anticipate using NANOOS Governing Council for selection for proposal
- Anticipate modular budget

# IOOS Summit Declaration

INTERAGENCY OCEAN OBSERVING COMMITTEE

INTEGRATED OCEAN OBSERVING SYSTEM (IOOS)

## IOOS SUMMIT 2012 DECLARATION

*In the United States, critical decisions affecting our lives, livelihoods and quality of life depend on successful communication and understanding of accurate and reliable scientific information about our oceans, coasts and Great Lakes. The U.S. Integrated Ocean Observing System (IOOS®) is a coordinated national, international, regional and local network of observations, modeling, data management and communications that provides the knowledge needed by society to protect life and property, to sustain a growing economic vitality, to safeguard ecosystems, and to advance quality of life for all people. Building upon progress over the past several decades, we must continue to expand, improve, and sustain the system to address the growing societal needs for ocean observations and information.*

## BACKGROUND

The Interagency Ocean Observing Committee convened an IOOS Summit, on November 13-16, 2012, ten years after an initial workshop defining IOOS requirements. The participants at the Summit reviewed progress in the design and implementation of IOOS. They identified the notable successes in developing a functioning system, as well as the technical and practical challenges and opportunities that IOOS will face in the coming decade. This Declaration captures and emphasizes the findings and commitments of the participants in the Summit.

IOOS is a national endeavor that is endorsed by federal and state agencies, tribes, academia, industry and NGOs; and is a partnership at the national and regional levels through the federal agencies and the IOOS Regional Associations. The past ten years have seen substantial progress in designing and implementing U.S. IOOS. We are delivering real value to the American public and foresee even greater contributions in the coming decades.

## UNDERSTANDING OF THE NEED FOR IOOS

Recent events underscore the importance of IOOS to the economic, security and environmental interests of the United States.

# 1. Observing Capability

- All IOOS components currently under-observe their target phenomena. IOOS will seek to encompass deep-ocean observations, nearshore and estuarine observations, biological and chemical variables, ecosystem variables; to better integrate remote sensing; and to meet spatial (including sub-surface) and temporal requirements for ocean data, addressing user needs.

This will build on the successes of the coordinated global ocean, terrestrial, atmospheric observing systems.

# 1. Observing Capability

- Keep doing what you are doing
- Bolster DMAC for increased bandwidth
- HF on WA coast, include spares
- More profilers in gradient regions
- Gliders/autonomous to fill in fixed platform gaps
- Surface and deep current sensing
- Bio-phys-chem measurements of open ocean to estuarine connectivity
- Increase habitat monitoring, including biology
- Acoustic telemetry for biology and fisheries
- Cameras sensors for biology
- Microbial communities as sentinels for change
- Interact with coastal communities to understand needs
- LIDAR expansion
- RA NASA test-bed satellites for RS
- UASes (drone) in the air to monitor bio-physical-chemical variables
- Ocean noise monitoring
- Technical / vocational training to support all the observations

## 2. Technology & Workforce

- IOOS will promote leading edge technology development capabilities. IOOS will incorporate emerging technologies as a standard operating procedure, in particular leveraging the development of the Ocean Observatories Initiative. IOOS will foster the development of a workforce for the future, adept at developing, using and furthering these technologies.

## 2. Tech & workforce

- In context of NANOOS, invest in cheaper, simpler technologies that will last and require less training
- Develop technologies, genome on a chip, non-wet biochem sensors, bacterial/indiv particle ID, identify species
- Unattended chemical sensors
- Continuous sensor development, satellite air, space-borne
- Synoptic observations of biology
  
- Workforce: internship/fellowship for ocean obs/techs
- Post-docs, grads, w/ cross training in federal labs
- Hiring young investigators
- Citizen scientists
- New course work developments
- Training programs for techs (comm college)

# 3. Modeling and Predictive Capability

- Models and observations will work together to provide the information needed by user communities. Improved and more sophisticated models will better exploit IOOS observations, leading to more precise and accurate predictions to aid in making economic, environmental and societal decisions.

# 3. Modeling and Predictive Capability

- Keep what you are doing and expand capability to new areas
- Develop climatologies
- Demand for wave models; sustained funding for wave modeling
- Sediment transport,
- Oil hazmat modeling
- Food-web models; fisheries; incorporate of biology & biochemistry in the models
- A needs assessment should drive this, vice modeling for modeling sake
- Invest in interdisciplinary modeling for today's operations
- Modeling for future change, anticipate changes and effective responses
- Support national model backbone assigned to a federal agency
- Use models to fill in gaps of observations, reduce observing needs
- Use models to help with observing system design
- Data assimilation (50:50 split on whether to do this or not)
- Model verification and validation: model to model comparisons, model analytic solution comparisons (when we know what answer should be)
- Offer models with published caveats, best uses, applications

## 4. Information Products

- IOOS plays a foundational role by providing reliable access to quality-controlled data and information products that support critical decision making for multiple uses. The system preserves the value of the information now and for future generations. This information plays a critical role in ocean literacy and education at all levels.

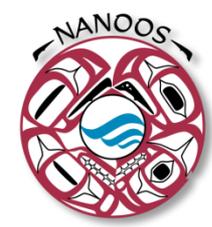

## 4. Information Products

- Information products are why we exist: should be our #1 priority
- Keep NVS, expand visualization capabilities
- QA/QC: automated, best practices, data validity, need for core metrics
- Information product access: web access to all obs and model data for more than 60 days
- Tools to access (profile, slices/sections, maps, temporal (monthly, seasonally, annually, decadal, and beyond)
- Archival: replicated outside Cascadia subduction zone
- Products for ocean literacy

## 5. Partnerships

- IOOS will continue to succeed as a collaborative effort among federal and state government agencies, tribes, regional partnerships, the academic community, and the private commercial and environmental communities.

The U.S. collaborative will help to sustain global efforts, as well as derive understanding and context from parallel efforts around the globe.

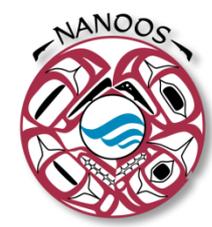

# 5. Partnerships

- Continue with international (Canada)
- Create and promote communities of practice for national glider, HF, etc. for common technologies/applications, etc.
- Maritime partners
- Fishing and recreation
- Public health
- Insurance and re-insurance industry
- NW tribes
- WA DNR & OR agencies (Parks, DEQ)
- State and federal agencies and parks associated with hydrol cycle, (USGS, EPA, NWS, NFS)
- FEMA
- OOI
- NGO on environ and other ocean conservation
- Atmospheric community v.v. deposition
- Value added industry

## 6. User Communities

- As the demand for economic growth and stability in sectors influenced by marine resources grows, it becomes more imperative to support an increasingly diverse user community.

# 6. User Communities

- Users are our #2 priority, think of them as consumers
- Outreach to coastal communities can't be stressed enough and yields benefits on many levels
- Re-evaluate our outreach strategies, and locational focus
- Industry
- Fisheries
- Marine industry/shipping
- Human / public health
- Energy (renewable)
- Deep sea mineral extraction
- Seafood industry, growers, harvesters, retailers (shellfish)
- Education and informal learning
- Tourism
- Recreational boaters, fishers, divers, surfers, etc.
- MPAs
- Software developers

# 7. Resources

- Federal support has been and will continue to be critical to the success of IOOS. New approaches to product development and distribution need to consider a broadening of funding support, additional funding sources, and innovative public-private partnership.

# 7. Resources

- Collaborations
- Institutionalize our partnerships with states and tribal nations; can these entities provide core funds? SLR, fisheries, climate change, issues...
- Maybe feds will shift toward more spending...cyclical...not just NOAA federal funds into our coffers
- Regional feds, engage with them on projects
- Various NOAA line offices ... engage
- Do something with industry, partnerships
- Funding from foundations
- Fee for services?
- Donation for services: adopt a buoy (PI)
- Space for advertising on website or buoy?
- Our own foundation for NANOOS?
  - e.g. National Marine Sanctuaries Foundation
  - IOOS Association is a non-profit
  - Question the 501c3s if they fund-raise successfully
